

# Python Keywords

Keywords are special words that are reserved by Python and cannot be used by you to name things. They indicate commands to the Python interpreter. The following is a complete list of Python keywords:

and	del	from	not	while
as	elif	global	or	with
assert	else	if	pass	yield
break	except	import	nonlocal	class
lambda	in	raise	continue	finally
is	return	def	for	
try	True	False	None
